App Cards

Diff Amp Module, 8-channel
USD \$199.00

Designed for precision buffering and amplification of analog signals derived from various sensors, the outputs of this board can be connected directly to MCU analog inputs. [\[Product Details...\]](#)

Servo/Sensor/Motor Interface Board for NanoCore12DX
USD \$129.00

Application board for use with NanoCore12DX, geared to mechatronics and robotics. [\[Product Details...\]](#)
