App. Cards

Diff Amp Module, 8-channel
USD \$199.00

Designed for precision buffering and amplification of analog signals derived from various sensors, the outputs of this board can be connected directly to MCU analog inputs. [\[Product Details...\]](#)

Adapt11 Quad Motor Driver Module
USD \$29.00

Drive 2 bipolar steppers or 4 DC motors at up to 1 Amp per channel. [\[Product Details...\]](#)

Adapt11 High-current Quad Motor Driver Module
USD \$39.00

Drive 2 bipolar steppers or 4 DC motors at up to 2 Amps per channel. [\[Product Details...\]](#)

Demo Card for all "Adapt"-series MCU Modules
USD \$29.00

Low-cost add-on module provides a broad selection of peripherals for learning hardware interface programming techniques. [\[Product Details...\]](#)

Servo/Sensor Interface Module for "Adapt" series products
USD \$39.00

[\[Product Details...\]](#)

Application Eval Card for Adapt H1 connector
USD \$109.00

Make learning more fun and productive with this multi-function modular evaluation and training board!
