**Resources** This keypad has the connector on the rear, along the bottom edge, as shown in the photos. It consists of a single strip of eight square pins, on 0.1-inch centers. Here are some ideas for making connections:

- wire-wrapping
- plug into a solderless breadboard

- plug into one half of a 16-pin DIP socket
- plug one row of a 16-pin ribbon cable over the pins and the other end to pins in your project board

A rough schematic of the keypad can be found here, showing the row and column pinouts:
